35g PRE Treatment Sachets for Jobsite Slurry & Water-Based Paint Washout

- **Rapidly separates solids**
- **Captures heavy metals**
- **Reduces pH of harmful jobsite wash water**
- **Treats Water Based Paint wash water**

CEMENT

GROUT

TILE GLUE

WATER BASED PAINT

JOINT COMPOUND

NEW SLURRY UP™ is clay-based **granular** powder designed to deal with messy, high pH jobsite wash water. **Empty** a **full** 35g sachet into your washout bucket, give it a stir and let **SLURRY UP™** get to work. Solids bind together and drop to the bottom, pH is reduced and your waste bucket is ready to run through your **SLURRYTUB®** for quick filtering, cleaner work sites and easier compliance.

INSTRUCTIONS FOR USE

ADD

35g SLURRY UP™ treatment sachet to 20L (5 gal.) bucket of tap water or your slurry waste bucket.

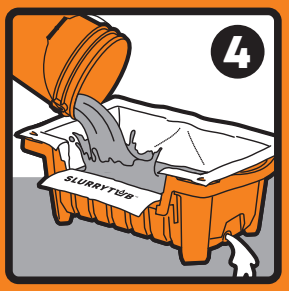

ACTIVATE

Mix thoroughly for 2-3 mins to fully activate and hydrate SLURRY UP™ particles (more mixing the better!)

SEPARATION

Allow larger slurry solids to form and settle in the bottom of bucket (NB. additional mixing can help form larger particles & cleaner water)

FILTER with SLURRYTUB®

Pour bucket contents into SLURRYTUB to filter (contain) solids, then recycle or compliantly discharge the clear* water.
