

Block splitters

Professionals around the world work with ALMI block splitters

ALMI® BLOCK SPLITTERS

Professionals around the world work with ALMI block splitters

Because professionals only want to work with the best tools.

After all, recurring lost hours and downtime cost more than the one-off purchase of this quality product. That is why professionals choose ALMI block splitters.

With a range of twenty different block splitters, ALMI has the right tool for every application.

But there are more arguments from a business economic perspective:

- better labour productivity
- long technical service life
- no set-up costs
- no energy costs
- no water consumption
- no follow-up costs, such as wear of diamond wheels

Applications

ALMI block splitters are used in the:

- **Hardscaping** clay pavers, concrete blocks, paving slabs, natural stone, kerbstones, sand-lime pressed blocks and granite
- **Landscaping** clay pavers, paving slabs, concrete blocks, sand-lime pressed blocks, natural stone such as granite and concrete blocks/walls
- **Construction** concrete blocks, pavers, sand-lime/pressed blocks, and paving slabs
- **Prefab** panel bricks

In (road) construction, it is important to be able to rely on the tools you work with on a daily basis.

The costs of downtime and follow-up costs due to exceeding the delivery date caused by defective tools are many times higher than the one-off purchase costs. That is why you choose the quality of ALMI block splitters; a long service life and guaranteed trouble-free work.

Landscaping companies often combine the design and layout of gardens with the construction of ornamental paving. ALMI block splitters meet your quality requirements, so decorative paving can be laid quickly and professionally. And this method has an advantage for your clients: no noise, no dust and no water and energy consumption.

High-quality production automation

ALMI has been producing block splitters since the 1950s. The ALMI block splitters are welded on a robotic welding cell. Mandatory for robotic welding is that the parts to be welded are very accurate. This ensures a high-quality product. The post-processing is done at a fully automated machining centre that produces 24/7. The end result is a product of consistent top quality.

With ALMI block splitters your work is: efficient / reliable / sustainable / environmentally friendly / carefree and without health risks for your employees.

Benefits

- + *The stones remain dry and can be processed immediately*
- + *No electricity*
- + *No particulate matter*
- + *No noise*
- + *No risk of injury*
- + *Favourable energy efficiency with electric hydraulic block splitter*

PEOPLE

HARDSCAPING EASYLINE**ALMI PATENT****AL15 EASY**

Day after day pavers determine the street scene. Hundreds of thousands of craftsmen around the world work with a block splitter from ALMI. Splitting paving slabs is a sustainable way of working. The end result is in many cases equal to sawing, but with the advantage that it puts less strain on the user and the environment. Local residents, shopkeepers and shoppers are not bothered by noise and dust and it is many times faster. People, Planet, Profit

ALMI PAVERMARKER
"The pavers' chalk"

ALMI continues to innovate. The latest development is the Easyline. All manual block splitters from our Easyline split 20% lighter and have improved ease of use. With the Easy principle, the desired cutting height can easily be adjusted with one hand. The galvanised surface of the block splitter ensures that it is less prone to damage and has an even longer service life.

AL43SH14

ALMI PATENT

AL43SH23*

The patented electric hydraulic block splitters (AL43SH14, AL43SH23) are equipped with 5 cylinders in a row. This system, developed and patented by ALMI, ensures that the pressure is always distributed evenly over the surface to be split, resulting in a sharp and straight split. These block splitters ensure improved working conditions for the user. With one press on the button, a wide range of stone is split to size in a second, without any effort. The AL43SH14 and AL43SH23 are both equipped with a battery box containing a maintenance-free battery and a charger. You can work all day with a charged battery and the battery box can easily be removed from the block splitter after working hours to charge the battery at night. These block splitters use biodegradable oil.

Spring loaded support plates with measure indicator equipped with angle indicator. Even pressure distribution with 5 cylinders.

AL33**INFRA STANDARDLINE****AL33D**

The Standardline, where the cutting height can be set by means of two spindles, has been the trusted ALMI block splitter since the 1970s. In the past, this line was produced in the well-known ALMI yellow. Nowadays this line is also provided with an electrolytically galvanised surface, which means that it is damaged less quickly and has an even longer service life. As with the Easyline, the Standardline block splitters are also equipped with support plates with measure and angle indicator. This makes working with ALMI block splitters even easier.

AL33S

AL43S

These special block splitters from ALMI are equipped with flexible installed hard metal blades. Some types of stone (clay pavers, paving slabs) are not completely flat on the upper side. All block splitters from the ALMI S-series are equipped with flexible installed hard metal blades that adapt (max. 4 mm) according to the irregular surface of the stone. As a result, the pressure is distributed over the entire cutting width, resulting in a precise and straight split.

LANDSCAPING

ALMI PATENT

AL15 EASY

The following block splitters are extremely suitable for splitting types of stone that are often used in gardens. The AL15 Easy is an indispensable tool for every landscaper. With the AL43U Easy, AL43UT Easy and AL65UT Easy higher stones up to 40 cm (depending on the type) can easily be split to size. The AL43SH23 and AL90NSH40 also easily splits the hardest types of stone such as thick paving slabs, granite stone and marble.

ALMI continues to innovate. The latest development is the Easyline. All Easyline manual block splitters split 20% lighter and have an improved ease of use. Using the Easy principle, the desired cutting height can easily be adjusted with one hand. The galvanised surface of the block splitter makes it less prone to damaged quickly and ensures an even longer service life.

FOLLOW US

ALMI has also developed a special series of block splitters for construction. The types below are ideal for splitting large concrete blocks, sand-lime/pressed blocks .

The splitting result is excellent, and sawing is therefore unnecessary in many cases. No noise, no dust and no water required. The heavier types are equipped with a lifting eye and therefore easy to transport on site.

PREFAB

PANEL BRICK SPLITTER AL16SP

Traditional construction is changing. Construction is increasingly done in Prefab and panel bricks are often used. To offer a solution, ALMI has developed the panel brick splitter. This pneumatic splitter is equipped with a flexible blade that adapts to the surface of the panel brick. The panel brick is split to the desired size in a second. The advantage compared to sawing is the panel bricks can be processed dry, clean, tight and dust-free instantly. The panel brick splitter can be integrated into an automated production line. It has a high splitting speed due to the pneumatic drive, which enables efficient and cost-effective work.

PROFIT

*Stephan Jonasson, project manager, Xella Denmark;
In Denmark we had a dust problem on our construction site. I was looking for a different solution to these dust problems to improve the working conditions of the workers. During my search I came across ALMI.*

ALMI offers a block splitter that splits the Xella sand-lime/pressed blocks in a fraction of a second. The AL90KSH20 solves dust problems and improves production time. We have the AL90KSH for sale and for rent. I am very satisfied with this innovative machine and the fast solutions it offers.

splitter"**

*Xavry Bolkesteijn, director BolkesteijnBestratingen;
We regularly carry out projects for municipalities. This also applies to Hoogeveen town centre, where around 4,000 m2 of natural stone paving had to be installed. Because the work takes place in the middle of the shopping area and shopkeepers want to experience as little inconvenience as possible, the work is phased in very quickly!*

The natural stone boulders were initially going to be sawn, but this would take a lot of time and cause noise. In addition, sawing gets quite messy, so you get stains in the pavement/planters. In consultation with the municipality we therefore did a test with the ALMI electric hydraulic block splitter. The result is amazing and we have been allowed to split all Swedish granite boulders with the electric hydraulic ALMI block splitter, type AL43SH23.

The municipality appreciates this, especially because pedestrians can now shop undisturbed.

References

Jan Steggink, Code Orange;

These days the paving profession is still a tough job, but also a great job with varied activities. Code Orange works with a dedicated team on a beautiful and sustainable projects. We use ALMI block splitters for these projects. Together with ALMI, we have started a process to indentify the advantages of block splitters regarding healthy and safety and involve municipalities and decision makers. We do this under the slogan: paving = splitting, unless...

That way paving becomes easier, safer, cleaner and the quality is guaranteed. We have shown that our professionals can offer the perfect end result with ALMI block splitters, in various projects, including a large project in Hengelo.

Day after day the paver determines the street scene
